

GERMAN DALLACASA

Architect | Design & Planning

Germán Dallacasa is an architect with over 25 years of experience in residential design, construction, and project delivery. His work includes single-family homes, multi-family housing, and small-scale developments, combining design sensitivity with strong technical and construction knowledge. He has led and delivered numerous projects in Argentina and has international experience collaborating across different regulatory frameworks, including the preparation and submission of planning applications to local authorities. His expertise spans architectural design, space planning, technical documentation, and 3D visualization. Currently, he focuses on remote collaboration with international studios, contributing to design development, drafting, and planning submissions. He is available for remote collaboration.

DESIGN - CONSTRUCTION - DEVELOPMENT

MULTI-FAMILY RESIDENTIAL DEVELOPMENT

ROSARIO, ARGENTINA.

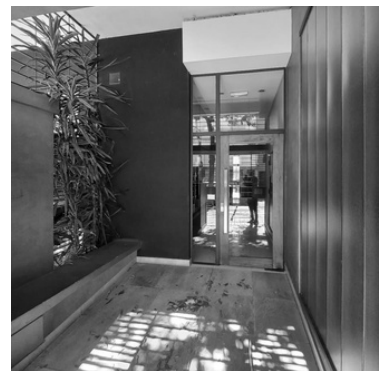

ARCHITECT-LED DEVELOPMENT FROM CONCEPT TO COMPLETION

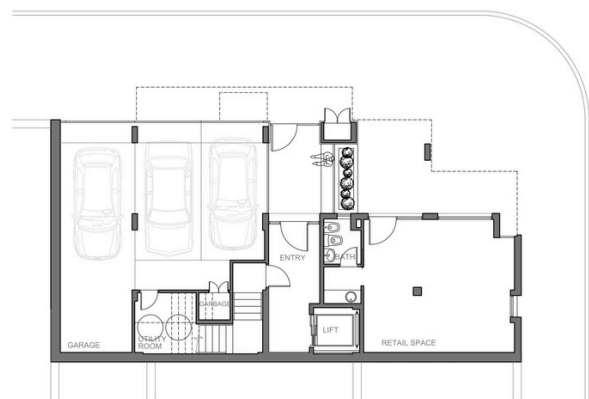

This project involved the complete lifecycle of a real estate development, from land acquisition and architectural design to construction management and final sale.

The building was designed to maximize natural light and urban presence, with all primary living spaces oriented to the north and facing the streets.

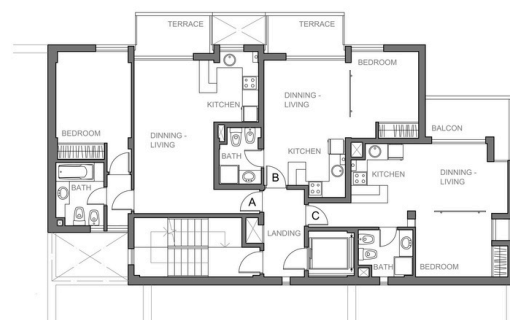

The project combines efficient structural systems with functional layouts and shared rooftop amenities, including a terrace, solarium and barbecue area.

- LOCATION

DESIGN - CONSTRUCTION - DEVELOPMENT

MULTI-FAMILY RESIDENTIAL DEVELOPMENT

ROSARIO, ARGENTINA.

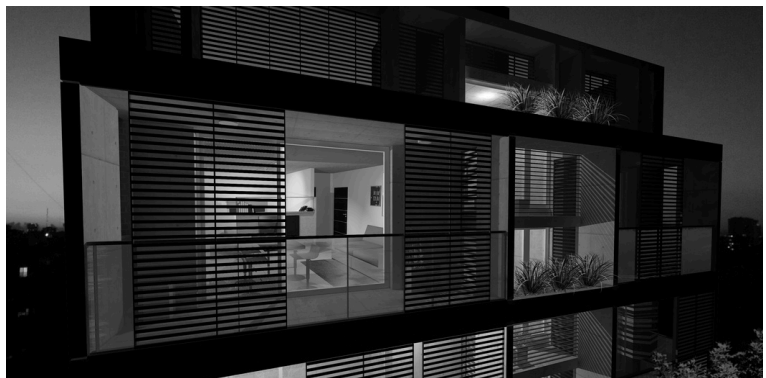

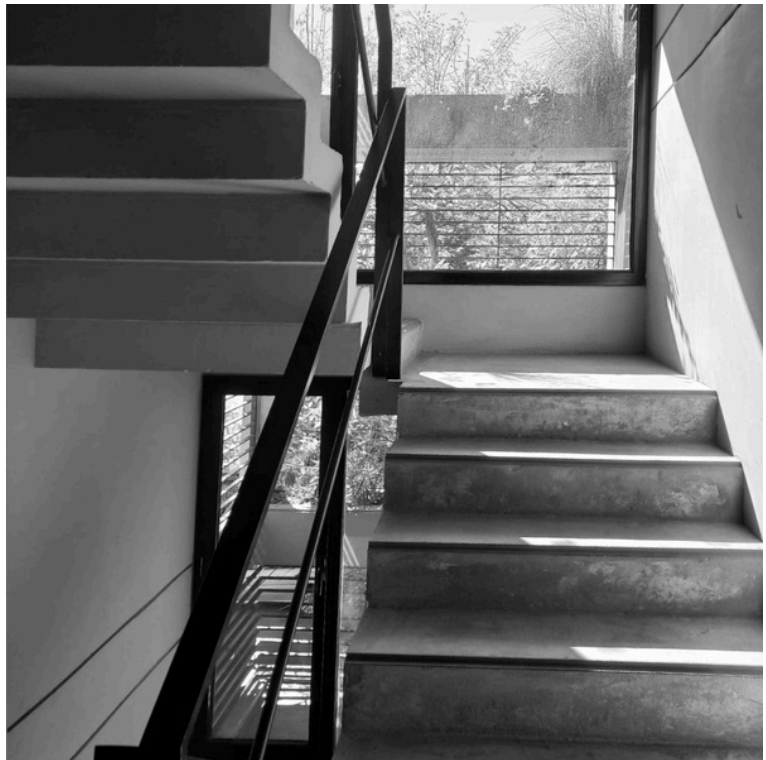

ARCHITECT-LED DEVELOPMENT FROM CONCEPT TO COMPLETION

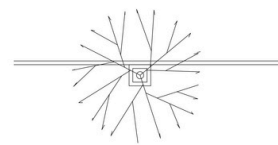

This project represents the second development carried out under an architect-led model, integrating design, construction, and real estate strategy into a continuous workflow.

Built on a compact 70 m² urban lot, the project addresses significant spatial constraints through an efficient layout that accommodates six residential units along with two ground-floor retail spaces.

The building is organized around a generously daylighted front staircase, conceived not only as a circulation core but as an architectural feature. Integrated planters enhance the vertical circulation, introducing natural elements that improve spatial quality and user experience.

RESIDENTIAL REFURBISHMENT & EXTENSION

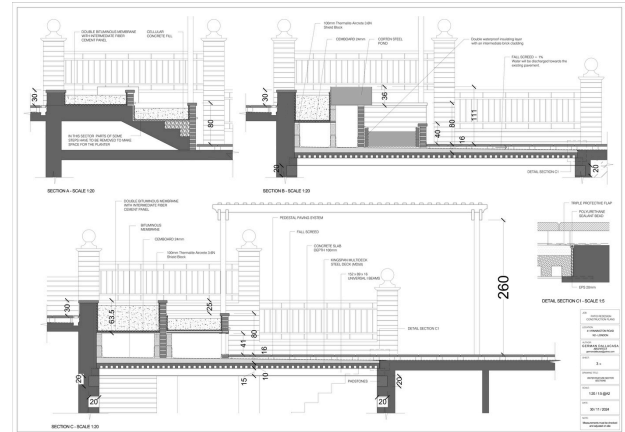

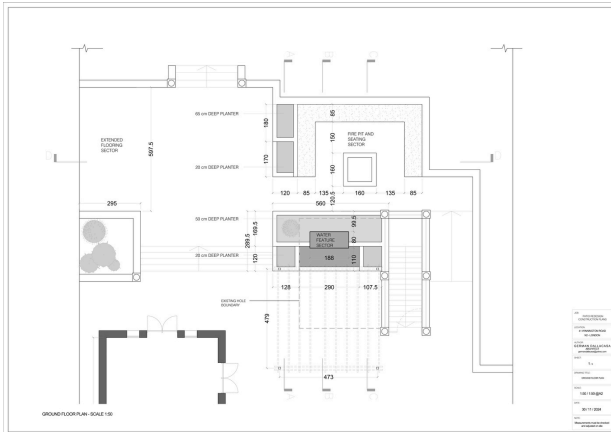

LONDON, U.K.

DESIGN DEVELOPMENT & PLANNING APPLICATION

- LOCATION
London, United Kingdom
- TYPE
Residential
- AREA
210 m2 / 2260 sq.ft.
- YEAR
2025
- ROLE
Architectural Designer

This project involves the partial enclosure of a basement courtyard, integrating a designed landscape with water features and planted areas, alongside the creation of an outdoor fire pit space.

The intervention also includes the conversion of the existing garage into a butler's pantry, and the addition of a new en-suite bathroom and study above the kitchen, enhancing the functionality and spatial quality of the main bedroom.

The scope of work covers architectural design development and the preparation and submission of the planning application to the local council and relevant trust authorities.

DESIGN - PLANNING

RESIDENTIAL REFURBISHMENT & EXTENSION

CARMEL BY THE SEA, UNITED STATES

DESIGN DEVELOPMENT & PLANNING APPLICATION

Residential refurbishment and extension with the addition of an ADU.

The proposal optimises spatial organisation and strengthens the relationship between existing and new volumes, improving overall functionality and residential quality. Architectural design and planning submission to local authorities.
